Two component, solvent free, low viscosity (LV) polyurethane injection system for the elastic sealing of cracks in concrete structures. Can be injected with a one-component pump. PURINJECT 2C ELASTIC LV is a CE certified system and is subject to: EN 1504-5 - Principle 1 - Protection against ingress and waterproofing; method 1.4 - the filling of cracks.

HOW DOES PURINJECT 2C ELASTIC LV WORK?

PURINJECT 2C ELASTIC LV is used to permanently seal dry or wet cracks or joints in concrete, stone and masonry. This system is used in construction and civil engineering both for new structures or repair purposes. PURINJECT 2C ELASTIC LV is a two component polyurethane system, consisting of a resin component and a special type of isocyanate (MDI based).

ADVANTAGES

This system is ideally suitable for the elastic sealing of cracks in concrete structures as well as areas suffering from water leakage problems. The use of PURINJECT 2C ELASTIC LV is depending on the amount of water expected. In case the crack is dry or moist PURINJECT 2C ELASTIC LV can be used directly into the crack. If an important leakage of water has to be stopped, the system could be used in combination with the PURINJECT 1C 115 ECO, which will first stop the water and/or react the water away, after which the injection of PURINJECT 2C ELASTIC LV can be carried out.

APPLICATION PRESCRIPTIONS

Although PURINJECT 2C ELASTIC LV is a two component system, it can be used as a one component system. PURINJECT 2C Elastic LV as a one component system:

- **Step 1**: Add the required amount of component A to the B component.
- **Step 2**: Mix thoroughly until a homogenous mixture has been obtained, which will be the case after about 2 minutes.
- **Step 3**: The mix can be pumped by means of a single component injection pump. Keep in mind that the processing time of the system is about 45 minutes at 20°C.
- After the injection the pump should be cleaned with PURCLEAN.
- To prevent condensation on the liquids at the start of work, the temperature of the components should be at least as high as the ambient temperature.
- All opened drums should be purged with dry nitrogen and capped when not in use. It is preferred to use an opened can as soon as possible.
- Pumps should be cleaned with PURCLEAN, a cleaning product specially developed for cleaning of polyurethane injection pumps.
- **Mixing ratio**: 1:1 (100 parts by volume of component A, 100 parts by volume of component B).

PACKAGING

Standard packaging:

- Sets of 10 kg
  - Component A: 5 kg
  - Component B: 5 kg
- Sets of 50 kg
  - Component A: 25 kg
  - Component B: 25 kg

Other type of packaging available on request. Can be supplied under private label.

STORAGE

To avoid problems, it is very important to understand that these materials are both temperature and moisture sensitive. Therefore, materials should be stored in an area with temperatures not exceeding 30°C or not lower than 10°C. The maximum shelf life time is one year. All partially used drums should be covered with nitrogen and re-sealed to prevent the ingress of moisture.

SAFETY AND HEALTH PRECAUTIONS

Do not breathe dust/fume/gas/mist/vapours/spray. In case of inadequate ventilation wear respiratory protection. If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If on skin or hair: Take off immediately all contaminated clothing. Rinse skin with water/shower. For more information, consult the safety data sheet.
