Odourless injection system based on silane/siloxanes. Injection of (masonry) walls against ascending humidity.

**APPLICATIONS**
Injection under low pressure against ascending humidity, trough bored holes, to create a horizontal barrier.

**COMPOSITION**
Low molecular silane/siloxane composition, solved in organic solvent, which penetrates deep in the treated wall. This product will react with water to form a horizontal barrier against ascending humidity. Product without smell.

**APPLICATION PRESCRIPTIONS**
- **Injection against ascending humidity**
  - Drill holes every 15 - 20 cm pointing down, at about 15 cm above the ground.
  - Place conic packer.
  - Inject under light pressure SILOXINJECT through conic packers.
  - SILOXINJECT will spread in the pores to create a horizontal barrier within the wall to stop the ascending humidity.
- **Pump**
  Manual injection pump supplied with 3-meter hose and suction system.
- **Packer**
  Use conic packers of diameter 8 or 10. Length 55 mm. Opening pressure 5 bar.

**PROPERTIES**
- Low viscosity.
- Penetrates very well in walls.
- Creates a horizontal humidity barrier.

**SAFETY AND HEALTH PRECAUTIONS**
Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.
Use explosion-proof electrical/ventilating/lighting/equipment.  
If on skin or hair: Take off immediately all contaminated clothing. Rinse skin with water/shower.
For more information, consult the safety data sheet.

**STORAGE**
Minimum 12 months.
