

One component, solvent free, polyurethane injection system ideally suitable for crack injection/water leaks in concrete and masonry structures. Reaction with water yields a flexible polyurethane foam. To be injected with a one-component pump. Use with 6 to 10% catalyst.

HOW DOES PURINJECT 1C MULTIFLEX WORK?

Reaction with water yields a flexible polyurethane foam. The formation of CO₂ makes the foam penetrate very well into the cracks. The reaction speed can be adapted by varying the accelerator or catalyst content from 6 to 10%. The more catalyst is added, the faster the reaction. The end product neither shrinks nor swells. A good compression strength is obtained in a very short time. Free expansion: 1500%.

APPLICATION PRESCRIPTIONS

Shake the catalyst well. Mix the resin and the accelerator in a ratio of 6% to 10% in function of the desired reaction speed. For injection: use packers and a 1 component pump. (manual or automatic). PURINJECT 1C MULTIFLEX is very hygroscopic. Use opened containers as soon as possible or cover under dry nitrogen. Pumps should be cleaned with PURCLEAN, a cleaning product specially developed for cleaning of polyurethane injection pumps.

TECHNICAL DATA

Physical characteristics of the uncured polyurethane prepolymer		
Subject	Value	Norm
Density	1,12 g/cm ³	EN ISO 2811-2:2002
Viscosity	± 245 mPa.s	EN ISO 3219:1994
Flash point	> 150°C	
Colour	Yellow	

Physical characteristics of the catalyst		
Subject	Value	Norm
Density	0,850 g/cm ³	EN ISO 2811-2:2002
Viscosity	± 51 mPa.s	EN ISO 3219:1994
Flash point	> 150°C	
Colour	Transparent	

REACTION TIME

Quantity of catalyst	Reaction	Polymerisation
6%	± 60 seconds	± 240 seconds
8%	± 45 seconds	± 180 seconds
10%	± 30 seconds	± 120 seconds

Indication at 20°C. Free expansion: 1500% of starting volume.

PACKAGING

Standard packaging:

- 25 kg resin and 2,5 litre catalyst
Pallet: 600 kg resin and 60 litres of catalyst
- 10 kg resin and 1 litre catalyst
Pallet: 750 kg resin and 75 litres of catalyst

Other type of packaging available on request. Can be supplied under private label.

STORAGE

To avoid problems, it is very important to understand that these materials are both temperature and moisture sensitive. Therefore, materials should be stored in an area with temperatures not exceeding 30°C or not lower than 10°C. The maximum shelf life is 2 years. All partly used drums should be covered by nitrogen and resealed to prevent the ingress of moisture.

SAFETY AND HEALTH PRECAUTIONS

For more information, consult the safety data sheet.
